Executive Summary

Complete Computing Company started as Crazy Computing Connor in 2010, as a self-employed business by Connor Greer.

Connor who had tried to get a part time job working for Tesco's, which he had previously worked for two years as a Christmas Temp, but was told that they had no free spaces when he applied at the Blackpool store in 2010.

After a little time for thought and research, Connor decided to start up a small Ad-Hoc IT support company, to gain experience while studying for a Degree in Software Engineering at University Of Central Lancashire (UCLAN) in the United Kingdom.

After spending a few weeks walking around Blackpool with a set of business cards, he was contacted by Alan Jones Chartered Surveyors, who was wanting their office writing for Networking as the WIFI was cutting out.

Connor supplied this and fitted 24 wall sockets, switch, new WIFI Access Points and also a Communication Cabinet to store the equipment.

Alan Jones was so pleased that they then asked for a monthly retainer for Connor to carry on the work and keep them running. Further to this, Alan Jones then asked for a Server to be installed for User Name and Document Storage.

Windows Server 2008 Datacentre was installed and configured on a PC that was repurposed for the Server Software.

Not long after this, Connor was Contacted by Council Of Voluntary Services (CVS) Blackpool, who had asked Connor to come and do maintenance on their server (which was a server that was running both Windows and Linux, in Dual Boot mode).

Within a year, Connor was looking after 20 small companies in Blackpool, Fylde Coast and Preston, the industries where ranging from Construction, Shipping, Manufacturing, Retail, Property and Private Education.

Connor renamed the company Complete Computing Company in 2014 as he believed that the name was a little juvenile for what he wished to achieve.

The Complete Computing Company now has companies all over the world that they support and have a 24/7/365 support line, with Network and Security staff on monitoring servers across the planet.

During our Time we have managed to secure partnerships with the worlds largest companies allowing us to provide a Service on top of what products we can offer for the same price as purchasing the product direct.

For Example:

Kaspersky Endpoint Security, we offer a managed service where we check all logs ACROSS all customers and report any issues and also any trends that we see to our customers.

Acronis Backup solutions, we check that the backups have been done and test these our so that we know the backups are working correctly.

Our Partnerships include:

3CX	Acronis	Barracuda	Cisco
Citrix	Dell	HP	Gigabyte
Intel	Microsoft	QNap	Cisco
Seagate	Silverpeak	TP-Link	Yealink

<p>Citrix system is a virtual machine creating software that allowed users to connect to a virtual desktop, server, application, or roaming profile through the web.</p> <p>Citrix system is a virtual machine that can be used while working from home or out of the office. The virtual machine is controlling by the company and reflect the user desktop on the virtual platform. Additionally, the Citrix system can also store and run the necessary software that runs online. As a result, the company can reflect the machines to create the same perspectives and abilities for the employers working from home.</p> <p>Complete Computing Company can create a configuration of the ThinClients that can be booted up to a Citrix desktop so that the real operating system or programs does not have to be located on any local/physical system. As a result, our client does run the company completely online. Complete Computing Company offers the storage space located on our servers.</p> <p>The main benefit of using the Citrix virtual machine is the security of the data in an event of the hardware damage. The hardware can be swapped out or damaged without the fear of losing the users data because all the files are saved online.</p>

Product Details	Quantity	Recurring Price	Recurring Option	Recurring Total
<p>We are proud to state that we own our own cloud system, it is hosted inside a datacentre that is heavily monitored and that only staff that need access, have the access.</p> <p>What our cloud solution will provide is a set of resources (RAM, CPU, Hard Drive, Network) that is rented out to yourself. This means that if any CPU,, RAM, or Hard Drive etc was to fail it is down to Complete Computing Company to repair that hardware and not you.</p> <p>While the hardware is being repaired/replaced, your VPS will migrate to another Server and run (99% of the time the Ram will be lost, unless it's a planned upgrade by ourselves and we migrate it, if this is the case the Ram will also be copied).</p> <p>With a VPS, you can also have private Networking between each of the VPS's on an account, this means that your traffic isn't seen by other VPS customers and you can have more than one VPS set up, for example:</p> <ul style="list-style-type: none"> • Domain Controller • SQL Database • File Server • Print Server <p>Each of the above would be able to communicate with each other and share data, as though they were located inside your building in the same room.</p> <p>We have designed our cloud services with security, reliability, and redundancy in mind.</p> <p>What does the above mean? It means we have planned for as many failures as we possibly can and tried to mitigate them in case one of the issues was to arise.</p> <p>Some examples:</p> <ol style="list-style-type: none"> 1. What if a hard failed in a server? <ul style="list-style-type: none"> ○ We have what is called a RAID, this means that a small section of the hard drive space is used for a backup. This backup isn't a permanent backup, it's just used in case a drive fails. ○ We also have a second server running with a copy of the data stored so that if a drive failed in one server the second server would carry on until the first is fully back up to date. 2. What if a switch fails? <ul style="list-style-type: none"> ○ We have at least two switches connected to our servers and two routers, each router has multiple internet connections, so that if one was to fail the others will carry on until we repair or replace the fault equipment. 3. What if our Virtual Private Server Fails (VPS)? <ul style="list-style-type: none"> ○ There are two options for if this occurs: <ul style="list-style-type: none"> ▪ We use the cloud backup system (snapshot), though this must be configured inside the cloud management web interface. ▪ We use the backup from your backup system, this can be one of the products we provide (Veeam, Acronis or our Managed Backups) or your own if you already have this in place. ○ We do advise using a dedicated backup solution as this is more reliable than the cloud snapshot. <p>*****Note ALL our VPS (VM) offering come with Acronis Server Licence, storage is an optional extra (all backups are managed by us at no extra cost).</p>

<p>In response for the process of ongoing growth in the IT industry Complete Computing Company offer different support packages.</p> <p>The Complete Computing Company focus on creating the package of the software that perfectly respond to your business needs. We are not just another company that treat all customers the same. We promise to treat each company individually and we realise that the same task might require different solutions.</p> <p>Our company guarantees to communicate well with all departments within your business to improve the efficiency of the everyday tasks.</p> <p>This allows us to gain a large knowledge about the processes that happens inside your business on the daily basis.</p> <p>Based on this knowledge we can create software that perfectly matches with your company and with our wide range of products and information about your company needs, our team can create customised packages.</p> <p>Most companies are not using their current technology in the most efficient approach. This is either by using a solution that was “recommended” by the head of IT, though this was probably because that is what they were used to, rather than what was best.</p> <p>Our company focuses on the question ‘What else we can do for you?’.</p> <p>In response to this question we aren’t a traditional IT company, we don’t just “Fix the Problem” we try to stop the problems from happening by being proactive, seeing if space on the server is full, checking the overall health of the network, does the software allow for erroneous data to be typed in and saved?</p> <p>Of course there will be times where we need to learn, but we will hold our hands up and say “Hi, this is new to us, please let us look into this deeper”, we will speak with other companies using the software, the manufacturer, even try to replicate the issues ourselves internally and try to find a fix that way.</p> <p>As an external business that provide services for your company, we have an ability to learn and gain experience by working with our other customers.</p> <p>Experience is a crucial factor effecting our companies outstanding reputation on the market.</p> <p>What if an error saving comes up? Is it the disk space on the server? Is the network down? Did the user commit a mistake and the software is not allowing them to save erroneous data? As a company we can guarantee that our IT support prioritise to fix errors to keep your company running smoothly.</p> <p>Software Support: We work with lot of different software packages in our time, from off the shelf, run of the mill (for example Microsoft Office) to more specialist software (Capita SIMS.NET, used by schools for attendance and also multiple extensions for other features).</p> <p>As a result, our company can offer the solutions for all types of requirements. In comparison to other companies on the market, our company is flexible, and guarantees to adapt our solution to work with the current company software. Our mission is to improve not change. We also can set up helpdesk calls with the manufacturer of the software and talk to them in technical so that we can diagnose and repair the issue quicker because we speak the same language.</p> <p>Hardware Support: In comparison to other companies our mission is to improve not change.</p> <p>Complete Computing Company have access to over 20,000 Computer Parts, equipment and even Dell, HP and Lenovo equipment, though our partnerships.</p> <p>We believe that using the trust sources for parts and PC spares is crucial to reduce the risk of potential damages. Other companies sometimes buy things off eBay or Amazon then sell it on to you.</p>

Product Details	Quantity	Recurring Price	Recurring Option	Recurring Total
<p>Voice over IP is a protocol where you use the internet instead of traditional phone lines. This adds flexibility to phones where if a building is unusable and the Phone Server is hosted in the cloud then the phones can be picked up and moved to another location, instead of asking your phone provider to transition the line to another building.</p> <p>We can provide VoIP systems that are hosted inside our cloud system, phones that will work with the phone system and also all the management for the system (updates, system checks), backups and redundancy (depending on the edition purchased).</p>				
<p>Core Features:</p> <ul style="list-style-type: none"> • Extensions Unlimited • Import / Export Extensions via CSV • SIP Trunks / Gateways Support • Call Routing by DID & CID (DDI) • Extensive Codec Support • Receive Voice Mail via Email • Calling Line Identification Presentation (CLIP) • Call Transfers (Blind & Attendant) • Calling Line Identification Restriction (CLIR) • Call Forward on Busy (CFB) • Call Forward on No Answer (CFU) • Hold (CW) incl. Custom Music on Hold • Intercom / Paging / PA Announcements • Call Parking / Pickup • Busy Lamp Field (BLF) • Real Time System Status • Easy Backup and Restore (incl. Scheduled Backup) • VMware / Hyper-V / KVM Compatibility • Amazon, Google Cloud, Microsoft Azure • 3CX SBC Connectivity • Voicemail <p>Office Productivity:</p> <ul style="list-style-type: none"> • Sennheiser Headset Integration • Auto Attendant / Digital Receptionist • Ring Extension & Mobile Simultaneously • Integrated Fax Server (Central and per User) • Supported SIP Phones Integration • Manage IP Phones Network Wide • Automatic Plug & Play Phone Provisioning • 3CX Apps: Windows and Web Client, iOS, Android • Directory (Company & Private Phonebook) <p>Call Center Features:</p> <ul style="list-style-type: none"> • Call Logging • Click2Call Browser Extension

<p>Mobile Phones and Mobile Data is a critical part of business nowadays.</p> <p>The Complete Computing Company are proud to announce that we are capable of offering Unlimited* Data and Allowance Mobile Data Sim Cards and Mobile Phones.</p> <p><i>*Our Unlimited comes with unlimited UK SMS messages, unlimited UK standard geographic minutes and unlimited** data.</i></p> <p><i>**Unlimited usage subject to artificially inflated traffic fair usage policy. SIMs must be used in a mobile phone. If a) 650GB of data is consumed in 2 separate months in a 6 month period or b) 12 or more devices are regularly tethered using the SIM, we reserve the right to investigate whether the SIM is being used for non-standard purposes. In these circumstances we reserve the right to adjust the tariff or terminate the agreement. In addition, whilst roaming outside of the UK on unlimited data plans, and within standard inclusive or daily roaming destinations, usage is capped at 25GB per month and roaming restrictions may be applied.</i></p> <p><i>***Data over usage is charged at £0.40p Per MB (we auto limit Data Usage at Allowance to Stop Extra Charges)</i></p> <p><i>**** Priced Per Month</i></p>
